PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 2+ of experience designing and developing scalable web applications using the MERN stack and Next.js. Skilled in backend architecture, RESTful APIs, GraphQL, and building responsive pixel-perfect frontend interfaces from Figma designs. Experienced in end-to-end product ownership, AI platform integration, and role-based system design. Proficient in MySQL, PostgreSQL, and MongoDB with strong data modeling expertise.

TECHNICAL SKILLS

- Frontend: React.js, Next.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, Bootstrap
- Backend & APIs: Node.js, Express.js, Convex, RESTful APIs, GraphQL
- Databases: MySQL (Prisma ORM), PostgreSQL (Prisma ORM), MongoDB
- Data Modeling: Schema design, normalization, query optimization
- Auth & Security: NextAuth, Server-Side Authorization, role-based access control
- Tools & Platforms: Git, GitHub, Vercel, Figma

EDUCATION

MPhil Computer Science | University of Southern Punjab

Sep 2025 – Present

First semester completed with CGPA 3.2

BSCS | Bahauddin Zakariya University, Multan

Sep 2021 – Aug 2025

CGPA: 3.27

EXPERIENCE

Full Stack Developer | SoftHeight, Multan

Jun 2024 – Present

- Led end-to-end development of Ticketlabel, a full-featured event ticketing platform (inspired by Ticketmaster) providing clients with a cost-effective solution to sell tickets on their own websites — owning both frontend and backend from architecture to deployment.
- Engineered automated ticket generation pipeline reducing operational time by 40%, alongside ticket PDF generation, venue management, event scheduling, and artist management modules. Implemented pre-registration and pre-sale flows, and built a Virtual Queue System that grants limited users access to the ticket purchase page while placing remaining users in a real-time waiting room displaying their queue number and position — significantly reducing server load and traffic spikes during high-demand event launches.
- Built comprehensive role-based dashboards for admins and promoters with granular access controls, tailored workflows, and secure payment processing integrations.

Full Stack Developer | SpiralSols, Multan

Sep 2025 – April 2026

- Spearheaded end-to-end frontend development of We Love Joe, a full-scale Business Agent Platform enabling businesses to create AI-powered agents, purchase Twilio phone numbers, train agents with custom business data, and handle live customer calls — a small-scale SaaS project that provided extensive exposure to enterprise-level architecture.
- Extended scope beyond frontend on We Love Joe by contributing backend work including schema changes and API integrations, demonstrating initiative and full-stack ownership across the project.
- Delivered 7 pixel-perfect, fully responsive pages for Larya website from Figma designs with high fidelity to design specifications.
- Built and shipped two complete, fully responsive websites — Stable Summit and Vault Summit — each comprising 10 pages, converting Figma designs into production-ready React vite and Tailwind CSS code.
- Contributed to Klyno AI, implementing features including pricing UI, chat summarizer, conversation history limiter, and premium message controls.
- Integrated and dynamically displayed multiple AI models based on user subscription tiers within the Klyno AI platform.

Backend Developer Intern | Hattrick Solution, Multan

Mar 2024 – May 2024

- Built a School Management System using Node.js, PostgreSQL, Prisma ORM, and EJS templating.
- Developed a Chemical Inventory Management System using TypeScript, PostgreSQL, Prisma ORM, and GraphQL APIs.
- Designed and implemented complex relational database schemas with entity relationships and developed efficient GraphQL APIs for data querying and manipulation.
